EDUCATION

Master of Science (MS) in Computer Science

Sep 2018 – May 2020

University of Massachusetts Amherst

Amherst, MA

Bachelor of Science (BS) in Computer Science and Mathematics

Sep 2014 – May 2018

University of Massachusetts Amherst

Amherst, MA

PROFESSIONAL DEVELOPMENT

Technical Training & Self-Study

May 2023 – Present

- Self-studied ML foundations in depth: calculus, linear algebra, probability and numerical methods
- Pursuing DeepLearning.AI Data Engineering specialization (Coursera), covering pipelines, streaming, and cloud infrastructure
- Built and deployed end-to-end ML projects using Scikit-Learn, including cloud deployments on AWS

EXPERIENCE

Data Scientist

Aug 2021 – May 2023

Sensor Tower

Boston, MA

- Led expansion of analytics product from static global outputs to quarterly and geo-level estimates by refactoring a production Ruby pipeline and redesigning data workflows; implemented cross-platform blending and fallback logic to handle sparse data.
- Improved accuracy of production demographic inference system by enhancing bias adjustment with external population data and developing interpolation methods for time-resolved estimates; fixed country-level data issues impacting reliability.
- Validated and analyzed model outputs to resolve client data queries and support business reviews, improving trust in reported metrics.

Applied Scientist Intern

Jan 2020 – May 2020

Amazon

Cambridge, MA

- Developed semi-supervised intent classification models for voice assistants, leveraging large-scale unlabeled data to improve accuracy (~6%) and F1 (~4%) over supervised baselines.
- Implemented online deep learning models (feedforward, LSTM) in PyTorch using Hedge Backpropagation and self-training with consistency regularization for continuous learning from streaming data.
- Built an AWS-based streaming pipeline (SQS, EC2, S3) to simulate real-time ingestion of transient user data, supporting online training under strict data retention constraints.

Data Scientist Intern

May 2019 – Aug 2019

Weight Watchers

New York, NY

- Developed FastText-based embeddings for food items from large-scale user food journal data, enabling downstream applications such as food substitution and recipe recommendation.
- Improved embedding quality by constructing context windows from user meal histories (via SQL/BigQuery), capturing co-consumption patterns and outperforming naive approaches.
- Built and productionized an end-to-end embedding pipeline (Python, Pandas, spaCy), enabling repeatable training and deployment for downstream applications; showcased at *HealthRecSys 2019*.

PROJECTS

Predicting Vaccination Status | *Pandas, Scikit-Learn, Flask, Docker, AWS, Git*

Dec 2024

- Developed and optimized multi-label classification models using XGBoost, Random Forest, and Logistic Regression, achieving a best mean AUC of 0.85 (within 1% of the top score).
- Deployed the XGBoost model as a Flask web service, containerized it with Docker, and deployed it to AWS Elastic Beanstalk, demonstrating end-to-end machine learning workflow.

TECHNICAL SKILLS

Programming Languages: Python, SQL, Ruby, JavaScript, R

Machine Learning & Data Science: PyTorch, Scikit-learn, FastText, spaCy, NumPy, Pandas, NLTK

Data Engineering & Cloud: Google BigQuery, Amazon Web Services, Docker, Kubernetes, MongoDB, CI/CD

Tools: Git, Power BI
